Recently, our advisory board member, Prof. Nayandeeep Deka Baruah pointed to us a wonderful article published in the *Notices of the American Mathematical Society* about the **Nesin Mathematics Village** in Turkey. The village is a unique institution where students from various age groups come for a few weeks at a time to learn mathematics that is non-stereotype and which compliments their own curriculum. The article can be read [here](#), and the website of the village can be found [here](#).

There are various workshops organised in the village from time to time, and interested students in colleges and universities can also volunteer to be a mentor at one of the camps for students that the village organises.
